

Launch insurance products faster by transforming the business logic in your spreadsheets into easy-to-use APIs

**\$740K+**  
average cost savings

Save on development costs with a modern rating platform

**75X**  
faster run time

Complete tasks quickly with accelerated runtime performance

**30**  
days to launch new products

Launch new products in weeks, not months, with robust APIs

## Improve rating processes with what-if scenarios

- Plan and build your next product
- Test different rating versions
- Make critical decisions quickly

## Top 4 reasons insurers choose Insurity Spreadsheet API

### Turbocharge time to revenue

- Drive efficiencies for new products and programs by upgrading the business logic in spreadsheet workflows into reusable APIs
- Reduce costs in the product development lifecycle by 83% with an easy-to-use and flexible system

### Streamline compliance management

- Centralize risk governance, version control, and audit facilitation in one cloud-based location
- Manage authentication and access to sensitive Excel models and algorithms on a secure platform

### Boost operational efficiencies

- Maximize business logic management in Excel while leveraging advanced performance and flexibility from the cloud
- Level-up the rating process with support for multiple version inputs and historical comparisons

### Validate strategies and solutions

- Test assumptions confidently with user defined, bulk case generation
- Visualize process improvements with version comparison charts
