insurity

Insurity Underwriting

CONFIGURABLE WORKFLOWS | RULES ENGINE | REPORTING

Empower underwriters to focus on risk assessment, not routine tasks

Low code

Update workflows, rules, teams, and more with self-service configuration tools

API-enabled

Easily create API keys and webhooks to move data to and from sources and applications

Cloud native

Provide anytime, anywhere access and ensure compliance in a secure, scalable application

Top 5 reasons carriers and MGAs choose Insurity Underwriting

Streamline underwriting processes

- Reduce time underwriters spend sifting through data sources and systems by bringing all data together
- Highlight where underwriter approval is necessary and automatically refer risks with configurable rules

Improve decision making

- Automate tasks to remove rote decisions and routine work that distract from quality judgements
- Gain an account-level view of risk to underwrite multiple products together regardless of policy system

Foster collaboration

- Enable teams to monitor the entire underwriting process with real-time updates and collaborative workflows
- Communicate easily with the ability to comment on tasks, documents, and journal entries in real time

Integrate systems easily

- Import data from third-party providers, scoring engines, and more with easy-to-use APIs and event-based webhooks
- Configure interactions between multiple systems with orchestration tools and out-of-the-box connectors

Stay informed

- Understand performance across all books with reporting on hit ratio, renewal retention, and more
- Identify bottlenecks and opportunities to streamline processes with readily available operational metrics

50% reduction in number of underwriting tools

Consolidate all data, documents, and decisions into a single, cloud-native workbench

"When underwriting complex risks such as ours, realizing efficiencies through automation can be a challenge. [Insurity Underwriting] will allow us the flexibility of automating selected steps in the process such as data gathering so we can focus our expertise on analyzing the information and ensuring the highest quality and consistency in our underwriting execution."

Erin Selfe VP of Information Technology
