

50%

reduction in number
of underwriting tools

Consolidate all data, documents,
and decisions into a single,
cloud-native workbench

"When underwriting complex risks such as ours, realizing efficiencies through automation can be a challenge. [Insurity Underwriting] will allow us the flexibility of automating selected steps in the process such as data gathering so we can focus our expertise on analyzing the information and ensuring the highest quality and consistency in our underwriting execution."

Insurity Underwriting

CONFIGURABLE WORKFLOWS | RULES ENGINE | REPORTING

Focus on the most profitable submissions with AI-driven risk scoring

Quick configuration

Update workflows,
rules, teams, and more
with a low-code,
intuitive interface

Easy connectivity

Easily create API keys
and webhooks to move
data to and from sources
and applications

AI-powered platform

Transform how you
underwrite risk with an
AI-powered risk
scoring assistant

Top 5 reasons carriers and MGAs choose Insurity Underwriting

Streamline underwriting processes

- Reduce time underwriters spend sifting through data sources and systems by bringing all data together
- Highlight where underwriter approval is necessary and automatically refer risks with configurable rules

Improve decision making

- Automate tasks to remove rote decisions and routine work that distract from quality judgments
- Leverage dynamic risk triage and automated data extractions to deliver an account-level view of risk across multiple products

Foster collaboration

- Enable teams to monitor the entire underwriting process with real-time updates and collaborative workflows
- Communicate easily with the ability to comment on tasks, documents, and journal entries in real time

Integrate systems easily

- Import data from third-party providers, scoring engines, and more with easy-to-use APIs and event-based webhooks
- Configure interactions between multiple systems with orchestration tools and out-of-the-box connectors

Stay informed

- Understand performance across all books with reporting on hit ratio, renewal retention, and more
- Identify bottlenecks and opportunities to streamline processes with readily available operational metrics
